Wera's Tool-Check PLUS with improved functions

Wera love to challenge not only general standards but also their own. One of Wera's bestselling products – the Tool-Check PLUS – has now been put to the test. The new version of the Tool-Check PLUS has two new features.

A very easy-to-use opening and closing mechanism via a sliding switch. This allows all tools to be quickly accessible while staying secure during transport.

Intuitively recognizable operating and locking components in Wera Green ensure that individual tools are secured even during transport.

The contents have also changed: The bits have been upgraded and equipped with Take it easy colour coding. This makes the required profiles and sizes even easier to find, speeding up work.

The Tool-Check PLUS combines screwdriving tools in a compact format and is ideal as a universal companion for a wide variety of screwdriving applications. It contains the following tools:

- A bitholding screwdriver with Kraftform Plus handle for comfortable ergonomic screwdriving, avoiding blisters and calluses.
- The Zyklop Mini bit ratchet for quick work when screwdriving with a machine or conventional hand tool is not possible due to space constraints. Rapid reversing from clockwise to counterclockwise rotation and vice versa via the reversing lever, quick rotation (with your thumb) thanks to the knurling on the thumbwheel. The fine toothing allows a small return angle of 6° for precise working. The ratchet is drop-forged from solid steel for maximum robustness. Torques of over 65 Nm can be easily achieved with this small tool.
- A Rapidaptor bit holder for lightning-fast bit changes with just one hand – even for the smallest bit sizes without any additional tools. With a fast-rotating sleeve. Can also be used as an extension.
- Take it easy bits for universal use.
- Hand and machine sockets with the Take it easy tool finder advantages.
